VADER

C*****

While this is a good piece of fiction, the spiritual landscape in which it takes place REALLY has me taking a second look at this series.

D*****

Come along with me on my re-read of the epically magical series "Harry Potter". 🤓⚡

T*****

"Nitwit! Blubber! Oddment! Tweak! Thank you!"

Web Scraping

Identify Themes

Topic Modelling

(3) Topic Modelling

Latent Dirichlet Allocation (LDA)

- Looks at all the documents (reviews)
- Identifies which topics there are
- Identifies how many topics there are

PyLDAvis (Visualise!!!!)

- **Topic Circle:** size = importance
- **Distance:** how closely related
- **Relevance:** helps us what the topic is about

Coherence Score

- Measures Interpretability of Topics
- Many different ways to calculate
- High score = Good

0.381

What do I have?

Review	Web Scraped	Data Collected From GoodReads
Sentiment Label	Sentiment Analysis	Used VADER to get a polarity score, then used the score to label positive, negative, neutral
Topics	Topic Modelling	Used LDA to get topics for each review
Other	Web Scraped	More data collected from GoodReads: Ratings Likes Images...

A timeline works fine

Feature Engineering

Other Languages; Typos;
Contractions

More Data

Use more data for better results.

Bigrams/Trigrams

Use bigrams or trigrams instead of
word tokenisation for modelling.

Questions

THIS IS RIDIKULUS!
Just give me a
book

I'm going
back to
my closet
